Benchmark index	S&P 500 [®] Dynamic VEQTOR Net Total Return Index

Investment objective

The PowerShares S&P 500 VEQTOR UCITS ETF aims to provide investors with investment results which, before expenses, correspond to the price and yield performance of the S&P 500[®] Dynamic VEQTOR Net Total Return Index in US dollar terms by gaining exposure to, as far as practicable, all of the instruments of the Index in their respective weightings. The S&P 500 Dynamic VEQTOR Index is rebalanced daily, while the broad market S&P 500 Index is rebalanced quarterly.

Benchmark index description

The S&P 500[®] Dynamic VEQTOR Index dynamically allocates long-only exposure between the S&P 500 Index, the S&P VIX[®] Short-Term Futures Index, and cash in order to gain broad equity market exposure with an implied volatility hedge. If losses in the Index are greater than or equal to 2% during the previous five business days, the ETF will move its entire allocation to cash or cash equivalents. The index seeks to mitigate risk between equity and volatility, while attempting to partially reduce potential losses in volatile markets. The Net Total Return version of the index was launched on 30 March 2015. The broad market S&P 500 Index is widely regarded as the best single gauge of large-cap US equities and captures approximately 80% of available market capitalisation.

Past and backtested performance is not a guide to future returns. Source: S&P Dow Jones Indices, as at 29.01.2016. Investors cannot invest in an index directly. *In this graph, the S&P 500[®] Dynamic VEQTOR Index returns represent backtested Total Return performance for the period 20.12.2005 to 27.03.2015 and actual Net Total Return performance from 30.03.2015, based on rules used in the creation of the index. Backtested performance does not represent actual performance and should not be interpreted as an indication of such performance; it is provided for illustration purposes only. Backtested performance has certain inherent limitations. For example, it ignores certain factors such as the trade timing, security liquidity and the fact that economic and market conditions in the future may differ significantly from those of the past. Accordingly, backtested performance is not a guide or an indicator of future returns.

Risk warnings

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested.

The objective of the ETF is to provide broad exposure to the U.S. equity market with the intention to partially reduce potential losses in that market in line with the Index objective. It is not the intention of the Index to fully reduce all potential losses in the equity market. In addition, the hedging strategy used by the Investment Manager may not be totally successful when replicating the Index.

The ETF may use derivatives (complex instruments) to track the Index, although this may not be achieved. The use of such complex instruments may result in large fluctuations of the value of the ETF.
